Office Action Summary

Art Unit: 1745

1. Claims 1-7 and 14-16 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. (New Rejection)

Claim 1 recites a porous adhesive resin layer joining each of the respective electrodes to the separator. This is incorrect noting that it requires two such layers to accomplish this task.

There is no antecedent basis for "hole ratio" found in each of claims 2 and 3. It is also unclear exactly how the said ratio is determined, i.e., what values make up to form the said ratio? Clarification is required.

Claims 4-7 and 14-16, dependent on claim 1, fall therewith.

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

3. Claims 1, 4-7 and 14-16 are rejected under 35 U.S.C. 102(e) as being anticipated by Chen et al. (Chen) (New Rejection)

Reference is made to column 3, line 10 through column 4, line 48 of the patent to Chen along with Figures 1 and 2.

Art Unit: 1745

Applicant's arguments have all been considered but are deemed moot in view of the above new grounds of rejection.

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(f) or (g) prior art under 35 U.S.C. 103(a).

5. Claims 1-3 are rejected under 35 U.S.C. 103(a) as being unpatentable over Chen.
(New Rejection)

The only claimed feature not shown by Chen is the "hole ratio". Such is deemed to be an obvious design expedient to one of ordinary skill in this art. The amount of

Art Unit: 1745

holes in the adhesive vs. the amount of holes in the separator will depend on the use of the particular battery and thus a routineer would vary the "hole ratio" depending on the battery used.

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to John S. Maples whose telephone number is (703) 308-1795. The examiner can normally be reached on Monday-Friday from 6:30 to 4:00. The examiner can also be reached on alternate Wednesdays.
